

Health Protocol

The health and safety of the children is of highest importance. In order to keep all the children as healthy as possible, it is essential to follow the following guidelines at home and school.

A child is sick when:

- He/She has a fever ($\geq 38,5$ degrees).
- He/She has a contagious (childhood) illness.
- He/She has one or more of the following symptoms:
 1. Continuous vomiting
 2. Diarrhea
 3. Side effects from vaccinations (weepy, listless, generally not well) .

We kindly request that parents keep their child at home for 24 hours after having a fever and after having vomited.

We also request that parents pick up their child from school when:

- The child is too sick to join in the daily activities.
- The care of the child's health is too intensive for the teachers to be able to care for the rest of the class.
- The child's health risks or affects the health of the other children as well as his own.
